Software Engineer

Innovative and detail-oriented Software Engineer with a strong foundation in computer engineering, real-time data integration, and enterprise application development. Demonstrated success in delivering high-impact software solutions across industries including healthcare, biotech, and telecommunications. Skilled in object-oriented programming, full-stack development, and data analytics, with a proven track record of supporting end-to-end system integrations, optimizing performance, and ensuring regulatory compliance. Recognized for strong collaboration with cross-functional teams and delivering timely, customer-focused outcomes in Agile environments. Skills include:

Software Development | Object-Oriented Programming | Agile Methodologies | Front-End Development | Data Analysis
Real-Time Data Integration | Automated Testing | User Interface Design | Cross-Functional Collaboration

Tech Stack: C# | Python | TypeScript | React | Java | SQL | C++ | JavaScript | Git | Jira

Experience

Pfizer, Remote

April 2023 – June 2025

Software Engineer

Supported planning and completion of real-time data transfers of clinical data trials. Updated data mapping of system integrations for a data management system.

- Supported end-to-end integration testing for functionality and performance.

Prometheus Group, Raleigh, NC

May 2021 - March 2023

Software Engineer

Implemented features and troubleshoot user-reported defects for inventory-management, web-based enterprise application.

- Wrote object-oriented code and delivered Java Archive files to support advanced integration services between existing EAM software solutions.
- Collaborated with project managers and customers to ensure successful and timely product delivery.

Qualcomm, San Jose, CA

June 2018 - August 2018

Software Engineering Internship

Developed a database in C that processes parameters from AP commands that configure and update various Wi-Fi properties.

- Traversed the database using a parser to create and issue UCI commands that verify and commit Wi-Fi system updates.

Abbott Laboratories, Los Angeles, CA

July 2017 - December 2017

Software Development Co-op

Constructed design specifications and developed validation test cases in C# for the Appium testing framework to demonstrate appropriate use in the testing of a medical device application.

- Debugged and executed automated test scripts in C# to verify OS-dependent functionalities for medical device applications on iOS and Android platforms.

Draper, Cambridge, MA

July 2016 - December 2016

Data Analytics and Software Solutions Co-op

Wrote graphical user interface for game named Dr. Data to understand behavioral patterns of human subjects learning to use a new program with PyQt5, Python, and HTML.

- Implemented k-means clustering on data sets using the scikit-learn library of Python to interpret and categorize data.

Projects

Northeastern University IoT Open Innovation Lab, Boston, MA - Top 20 finalist out of 933 participants of Next-Gen Games in Physical Spaces Challenge

Northeastern University LSAMP Program, Boston, MA - Winner of the 2015 COSEE-TEK Ocean Science Competition

Education & Certifications

Bachelor of Science (B.S.) in Computer Engineering - Northeastern University, Boston, MA

National Society of Black Engineers (NSBE) - External Vice President (2017-2018), Secretary (2015-2017), Northeastern University Dance Company (NUDANCO)

Certification: Lean Six Sigma Yellow Belt
